18. Psychosocial Counseling & Mental Health

Nearly everyone with a brain injury has to adjust to their new capabilities. Some had mental problems before their injury; and some have jumped into some fantasy to escape the truth of their situation. But people with TBI have had a very disturbing event happen to them: their mind has undergone changes (or at least some important parts of it, like memory and attention). This event strikes to the very core of the person. It forces one to face issues that people don't often have to think about: the inability to do things that were once so easy, the mood swings and frustrations that are so common, and having survived a serious illness/injury.

So it makes sense that many of those with TBI could use some help in dealing with their current challenges. Among these issues are a lack of social awareness, impaired frustration tolerance, impulsivity, and emotional lability (mood swings); other consequences of the injury are also possible. Psychotherapists, social workers, and psychologists are trained to deal with many of the personal issues that people in stress must cope with.

One problem is that TBI is a very unique experience, and it is a formidable task to find a professional who knows about the specific issues of TBI and who is also empathic enough to feel the pain that people with TBI can face every day. So, as with most of the offerings in this book, it is best to investigate your options. And **ASK**. Ask what specific experiences (including educational experiences) the professional has had with TBI. Remember that TBI is not identical to stroke or mental illness and so experience in those areas will not necessarily translate well to working with someone with a Traumatic Brain Injury. Experience with disabilities is helpful: one learns about some difficulties that people with TBI have in common with those with other disabilities. An example of this is called spread effect, which is the perception that some temporarily able bodied people have towards persons with disabilities. The spread effect is the assumption that if they lack some physical ability or sense, then they have lost other abilities or senses too. (You have probably seen or heard of the couple, one of whom uses a wheelchair, in the restaurant and the server asking the non-wheel chair user what the other person wants to eat, as though one who can't walk also can't think or talk).

With this in mind, following are some psychotherapists, social workers, and psychologists that we have drawn from many lists. We can make no claims for their knowledge of TBI, their sensitivity, or their empathy in any one individual situation. We encourage you to investigate and remember that the person with the TBI is the customer, and the professional is providing a service. As a customer, you have the right to terminate services at any point. But remember also that part of the therapist's job is to tell clients things that they may not want to hear and help them to face their personal challenges; this often is stressful or even painful for the client. A 'nice' therapist is not necessarily the best and may be detrimental if the client could really benefit from facing his/her deficits and learning how to cope with them. Therapy can be a very exciting and awareness-expanding time; the right therapist can help guide that process to its maximal potential.

We're sure that many of you know this, but we feel we should explain the differences between psychotherapists, social workers, BSWs, MSWs, LCSWs, case managers, family counselors, MFCCs, psychologists, pastoral counselors and psychiatrists. The terms social worker, BSW (Bachelor of Social Work), MSW (Master of Social Work), and LCSW (Licensed Clinical Social Worker) all refer to peo-

18. Psychosocial Counseling & Mental Health

ple doing social work, which to a large extent involves finding resources for people and hooking them up with these resources. Case Managers coordinate service provision and help the client to maximize the results of the services rendered. Some also deal with the emotional and psychological issues their clients have, and are trained to work with these issues, but most have an emphasis on the more concrete issues that a client has. At the end of this chapter we have included a small list of Case Managers who know TBI and how to work with those with TBI. A family counselor or an MFCC (Marriage, Family, and Child Counselor) most often deals with psychosocial issues that affect one's family or that arise from family dynamics. Psychologists, especially counseling psychologists, deal best with intra- and interpersonal issues and the ways they affect the client's life. They have had the most extensive training in the field. Pastoral counselors work with psychosocial issues, and can be quite effective when the client is religious or respects religion enough to listen to the counselor. Psychiatrists are medical doctors who have undergone additional training in treating the mind. They can prescribe medication; some may also perform psychotherapy.

With all the above said, the list of agencies, psychotherapists, social workers, and psychologists follows.

COUNSELING/ASSESSMENT SERVICES DIRECTORY

Brain Injury Law Office

800/992-9447

212 Whitetail Run lane

Sheboygan, WI 53081

Email: johnson@tbilaw.com

Austin, TX 78745-9835

Website: <www.psysolutions.com>

- Neuropsychiatric program diagnoses and treats children and young adults.

INDIVIDUAL PSYCHOTHERAPISTS

Some psychotherapists are trained in neuropsychology and offer neuropsychological assessment, which can be very helpful both in demonstrating that brain damage occurred (and that the person has deficits from the TBI) and in evaluating cognitive strengths and weaknesses, so that some plans can be made for compensation. They are listed below with a star (*)

Jeffrey Becker, Ph.D.

1625 The Alameda, Suite 512

San Jose, CA 95126-1428

408/293-6313

Cheryl Bowers, Ph.D.

740 Front Street, #345B

Santa Cruz, CA 95060

831/430-0100

***Lawrence Bencich, Ph.D.**

134 Palm Avenue

San Rafael, CA 94901

415/453-4069

Renee Burgard, LCSW

675 Forest Avenue

Palo Alto, CA 94301

650/493-4319

- Experience with TBI.

18. Psychosocial Counseling & Mental Health

James R. Cole, Ph.D.

110 La Casa Via, Ste. 130
Walnut Creek, CA 94598
925/935-8839

Kellene Cousins, Ph.D.

P.O. Box 20094
Castro Valley, CA 94546
925/846-4779

•Experience with TBI.

***Richard Delmonico, Ph.D.**

Rehabilitation Center
975 Sereno Drive
Vallejo, CA 94589-2485

MENTAL HEALTH AGENCIES

We feel that it's important to state first that persons with TBI are not 'crazy' from their injury. But there is often a need for mental health services, as they have had an experience that has struck them to their very core, and often, especially with young people who have no like experience, the defense mechanisms that people generally use as anchors fail them to some degree and they find themselves adrift. This is when mental health services can be of help.

Alum Rock Counseling Center

408/294-0500

1245 E. Santa Clara Street

San Jose, CA 95116

- Family counseling.

Alliance for Community Care

408/261-7777
